**Goals:**
- Have your first app running on your Device
- Learn how to modify color and text size for TextView, usage of resources
- Learn how to create Activity and launch it from another activity
- ** Learn how to send action to the system to open URL in browser

Tasks

1) Go through the steps in lecture to create and run your Hello World app.
   You should get the following:

2) Change **text**, **textSize**, **textColor** (either via xml or visual Layout Editor) to anything you like.
   Don't forget to extract values to resources (**res** folder)

You will get something like this:

3) Create new activity called **SecondActivity** and open it by clicking on the **TextView** in **MainActivity**.

4) ** In **SecondActivity** add **TextView** and on clicking on it open URL in browser (using implicit intent)
